

There has been a big revival of interest in locally produced fresh food, which has travelled shorter distances than most food from supermarkets.

The Devizes area is blessed with a wide range of locally produced food from vegetables and meat to locally baked goods. But it is sometimes difficult to know where to find them. This directory aims to fill that gap.

Food production is responsible for a large proportion of the energy used in this country. All food production has an energy input but we can minimize this by the choices we make.

The most energy efficient foods are:

- Local food that travels only a few miles from farm to home or feet if the food is out of the garden
- Seasonal food that avoids the heat required to produce out of season
- Organic foods grown without chemical fertilizers

A compost bin in the garden reduces the food waste and buying local produce supports the local economy by keeping local money in the local area.

Sustainable Devizes promotes a more sustainable way of life in the Devizes area.

We can do a lot to create the change needed. Our five broad areas for action are:

- Consumption and waste
- Transport
- Energy efficiency and renewable energy
- Food
- The natural world

We work with other like minded groups and organisations in the area.
